Que 1 : Create a table called Playlist with columns: id, song_name, artist, genre, and play_count. Insert at least 5 sample records representing your favorite songs from Spotify.

```
CREATE TABLE Playlist1 (
   id INT PRIMARY KEY AUTO_INCREMENT,
   song_name VARCHAR(100),
   artist VARCHAR(100),
   genre VARCHAR(50),
   play_count INT
);
INSERT INTO Playlist1  (song_name, artist, genre, play_count)
VALUES
('Kesariya', 'Arijit Singh', 'Romantic', 150),
('Apna Bana Le', 'Arijit Singh', 'Romantic', 200),
('Chaleya', 'Arijit Singh', 'Romantic', 120),
('Heeriye', 'Jasleen Royal', 'Pop', 180),
('Tum Se Hi', 'Mohit Chauhan', 'Romantic', 100);
```

Que 2: Write a SELECT query to display only the song_name and artist from the Playlist table, but show the artist column as 'Singer' using an alias.

```
SELECT song_name, artist AS Singer
FROM Playlist1;
```

Que 3: Write a SELECT query to find all songs in the Playlist table where the genre is 'Pop' and play_count is greater than 100. Sort the results by play_count in descending order.

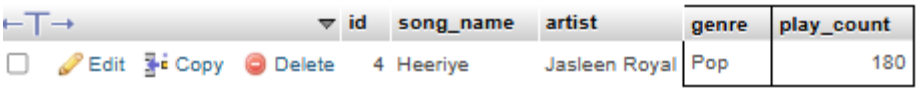

```
SELECT *

FROM Playlist1

WHERE genre = 'Pop'

AND play_count > 100

ORDER BY play_count DESC;
```

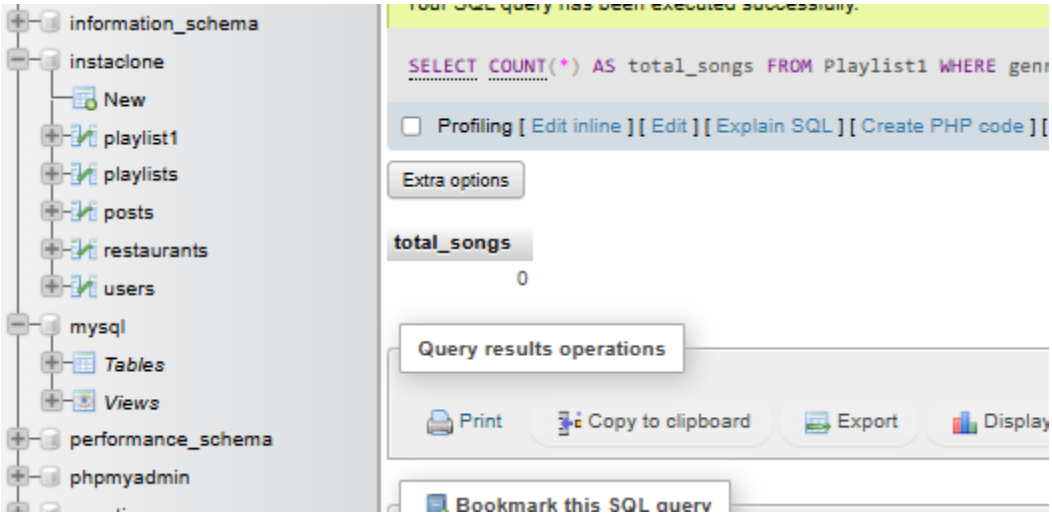

Que 4: Use the COUNT aggregate function to find out how many songs in your Playlist table belong to the genre 'Hip-Hop'.

```
SELECT COUNT(*) AS total_songs

FROM Playlist1

WHERE genre = 'Hip-Hop';
```

Que 5

Write a SELECT query that shows the total number of plays (SUM of play_count) for each genre in your Playlist table, grouped by genre.

Hint: Use GROUP BY with the SUM function to aggregate play counts by genre.

SELECT genre, SUM(play_count) AS total_plays

FROM Playlist1

GROUP BY genre;
