Que 1: Create two tables in SQL: influencers (with influencer_id as PRIMARY KEY and name) and posts (with post_id as PRIMARY KEY, influencer_id as FOREIGN KEY, and caption). Insert at least 3 influencers and 2 posts for each influencer.

```
CREATE TABLE influencers (
    influencer_id INT PRIMARY KEY,
    name VARCHAR(100)
);

CREATE TABLE post (
    post_id INT PRIMARY KEY,
    influencer_id INT,
    caption VARCHAR(255),
    FOREIGN KEY (influencer_id)
    REFERENCES influencers(influencer_id)
);
INSERT INTO influencers (influencer_id, name)
VALUES
(1, 'Diya'),
(2, 'Nisarg'),
(3, 'Ansh');
```

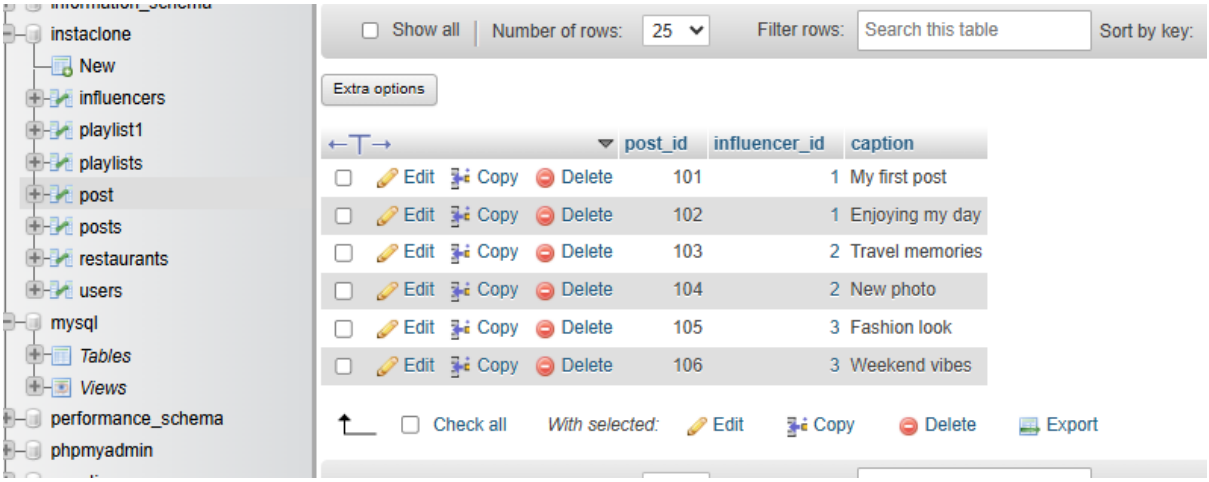

```
INSERT INTO post (post_id, influencer_id, caption)
VALUES
(101, 1, 'My first post'),
(102, 1, 'Enjoying my day'),
```

(103, 2, 'Travel memories'),

(104, 2, 'New photo'),

(105, 3, 'Fashion look'),

(106, 3, 'Weekend vibes');

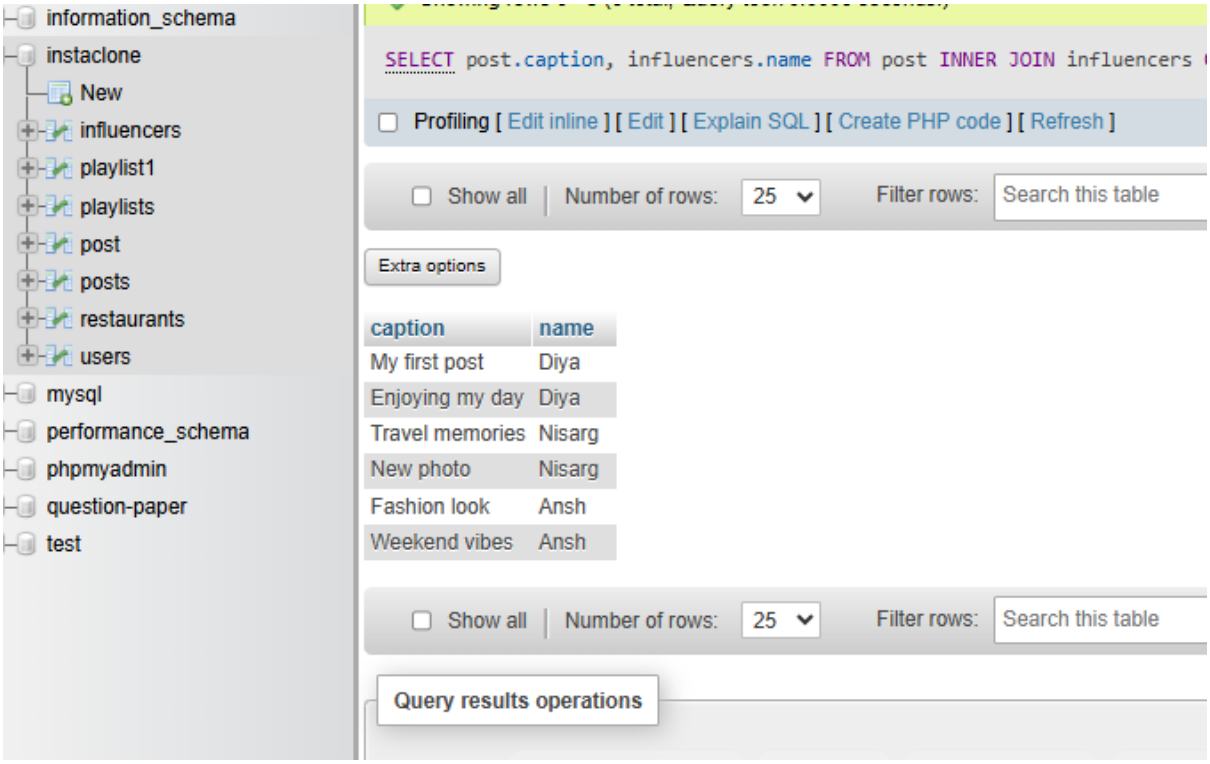

Que 2: Write an SQL query using INNER JOIN to display each post's caption along with the name of the influencer who posted it, based on the tables you created.

SELECT post.caption, influencers.name

FROM post

INNER JOIN influencers

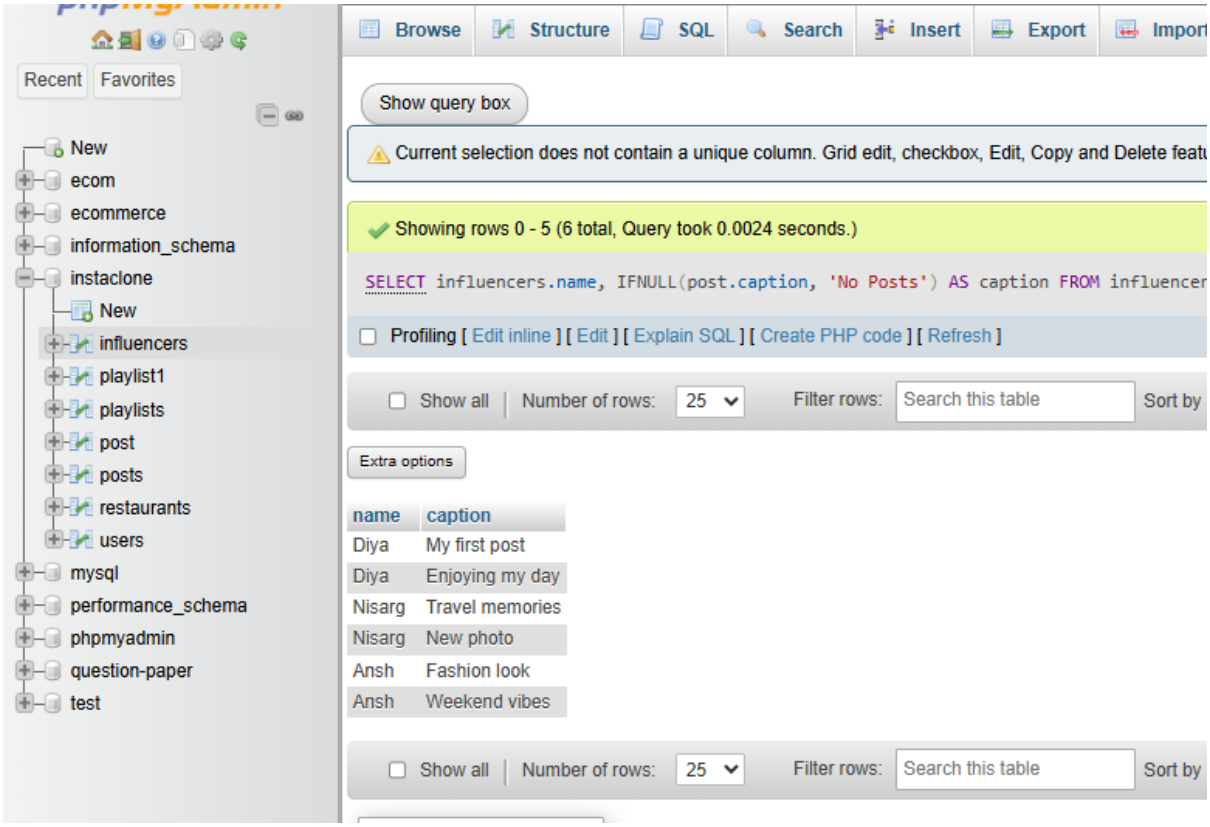

ON post.influencer_id = influencers.influencer_id;

Que 3: Write an SQL query using LEFT JOIN to show all influencers and their posts, including influencers who haven't posted anything yet. If an influencer has no posts, display 'No Posts' in the caption column.

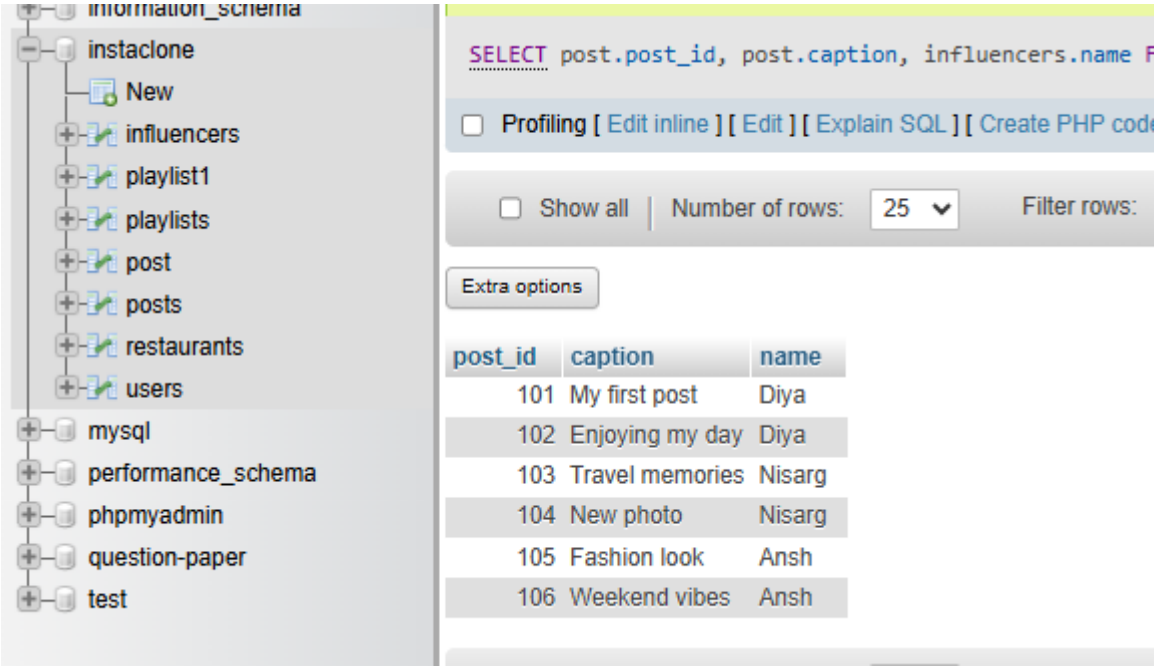

Hint: Use IFNULL or COALESCE to handle NULL values in the result.

```
SELECT influencers.name,
    IFNULL(post.caption, 'No Posts') AS caption
FROM influencers
LEFT JOIN post
ON influencers.influencer_id = post.influencer_id;
```

Que 4 : Write an SQL query using RIGHT JOIN to list all posts and the corresponding influencer's name, ensuring that even posts without a matching influencer_id (if any) are shown.

```
SELECT post.post_id,
    post.caption,
    influencers.name
FROM influencers
RIGHT JOIN post
ON influencers.influencer_id = post.influencer_id;
```
