Que 1: Create a SQL query using GROUP BY to show the total number of orders placed by each user in an 'orders' table, displaying user_id and order_count.

SELECT user_id, COUNT(*) AS order_count

FROM orders

GROUP BY user_id;

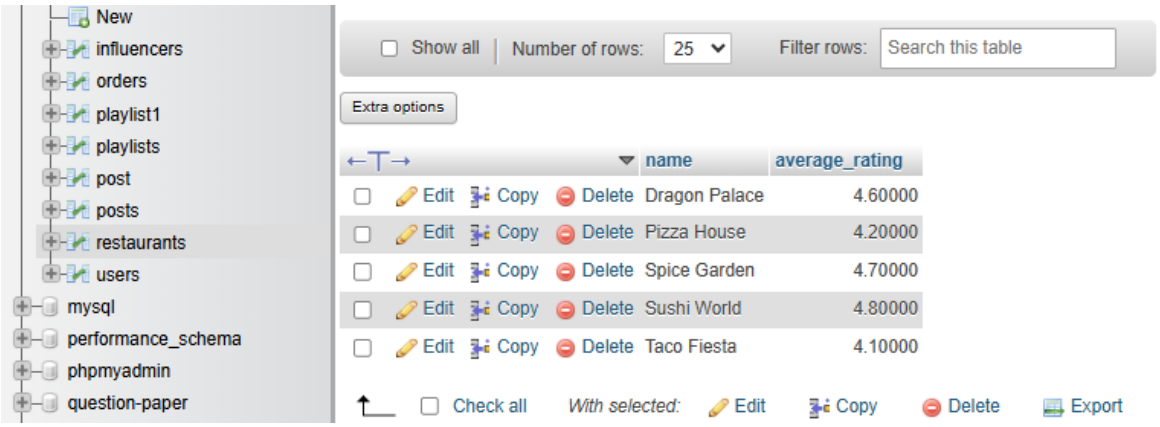

Que 2: Write a SQL query to display the names of restaurants from a 'restaurants' table that have received an average rating above 4.0, using GROUP BY and HAVING.

SELECT name, AVG(rating) AS average_rating

FROM restaurants

GROUP BY name

HAVING AVG(rating) > 4.0;

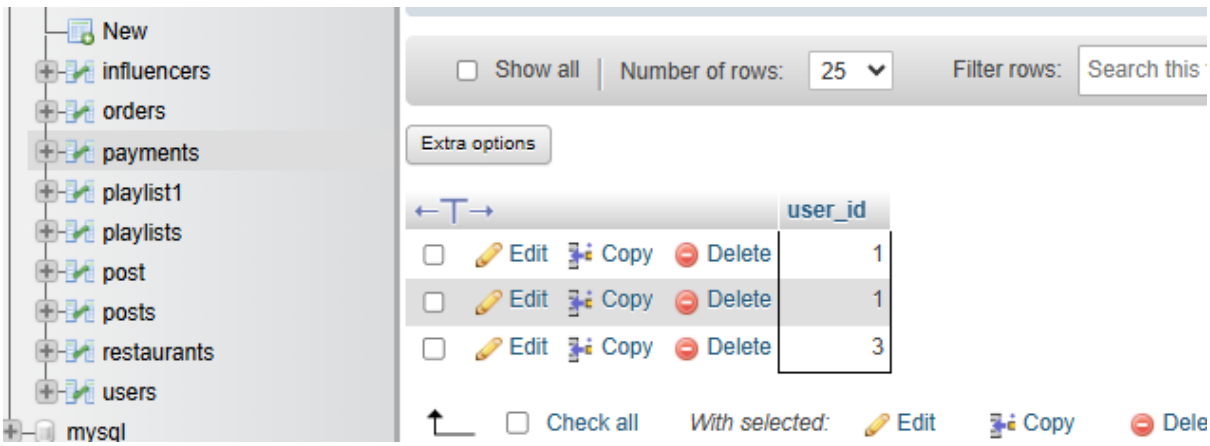

Que 3:

Suppose you have a 'payments' table with columns user_id, amount, and payment_date. Write a subquery to find user_ids who have made a single payment above ₹2000 in any transaction.

```
CREATE TABLE payments (
   payment_id INT PRIMARY KEY AUTO_INCREMENT,
   user_id INT,
   amount DECIMAL(10,2),
   payment_date DATE
);

INSERT INTO payments (user_id, amount, payment_date)
VALUES
(1, 1500, '2026-10-01'),
(1, 2500, '2026-10-02'),
(2, 1800, '2026-10-03'),
(3, 3000, '2026-10-04'),
(4, 500, '2026-10-05');

SELECT user_id
FROM payments
WHERE user_id IN (
   SELECT user_id
   FROM payments
   WHERE amount > 2000
);
```

Que 4: Using a nested subquery, display the names of movies from a 'movies' table that have a higher average rating than the overall average rating of all movies.

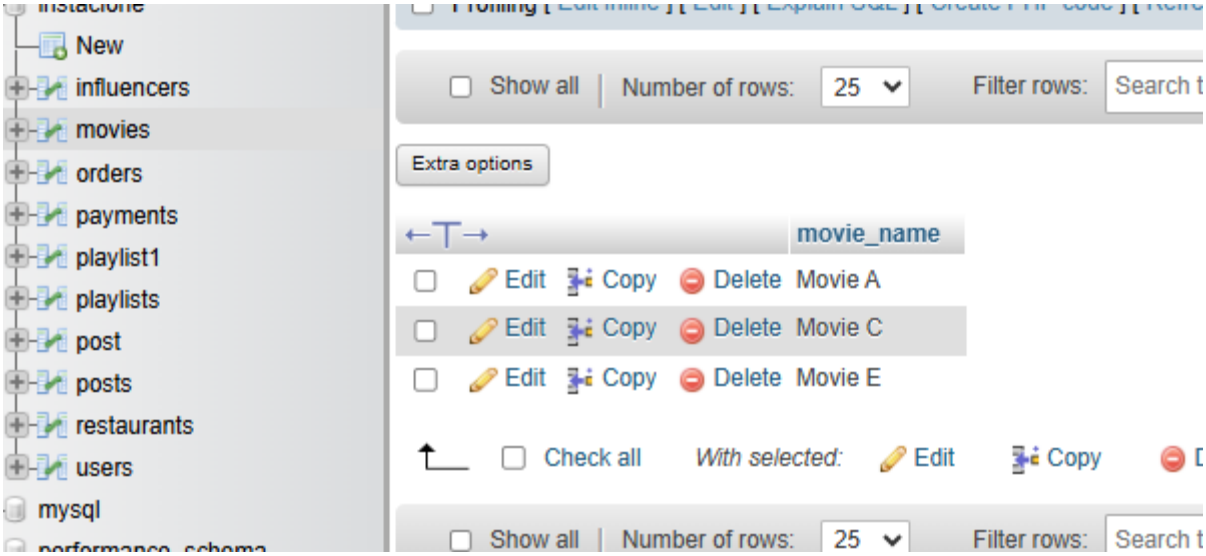

Hint: Use a subquery to calculate the overall average rating, then compare each movie's average rating against it in the main query.

```
CREATE TABLE movies (
   movie_id INT PRIMARY KEY AUTO_INCREMENT,
   movie_name VARCHAR(100),
   rating DECIMAL(3,1)
);

INSERT INTO movies (movie_name, rating)
VALUES
('Movie A', 8.5),
('Movie B', 6.0),
('Movie C', 9.0),
('Movie D', 7.0),
('Movie E', 8.0);

SELECT movie_name
FROM movies
WHERE rating > (
   SELECT AVG(rating)
   FROM movies
);
```
